[resolved - fixed, 20/Jun/2012]

[Now postponed to post 2.0.1 - we just do as we always have for 2.0.1]

Specifically a cut-off for translation quality, that if we fall below it's counterproductive to ship the translation file...

[dev fix made 2012-06-22]

[Resolved-Fixed 20/Jun/2012]

Check through bugzilla produced release notes.  
Often requires updates to the 'release notes' field  
for P3 bugs filed since the last use of the script.

James: Script and entries in bugzilla updated on  
28/Jun/2012 to address most of the reported  
issues. Mostly this is dealing more leniently with  
entries that aren't in the rather overly strict format  
the script originally required.

James: Fix the script to correctly handle three css files that are currently dropped. This will re-instate some styling that has been lost. I also fear/suspect that there are other changes to the manual that will have broken the script that need to be addressed.

Gale: "At the moment this isn't too bad as it's been worked around by copying the contents of: <http://manual.audacityteam.org/man/MediaWiki:Common.css> into skins/monobook/main.css on the server. "

James: Will need the work around as I am not going to have time to look at it before the likely release freeze.
